

Quantify 2018 v 8.3.1433.124

Version: 8.3.1433.124 **Release Date:** May 22, 2019

Enhancements

- The default filtering in the equipment request portal has been changed to only show items stocked at the parent location combined with the items at the job. This significantly improves performance when using a large product catalog.
- Updated digital certificate. If you're using QuickBooks then you will need to re-establish a trust relationship using this certificate.
- Update dependencies with the end-user report designer for compatibility with newer reports.
