

Handset Designer

Welcome to the Handset Designer Help Center.

With Handset Designer your primary focus is the structure. You can easily drag and drop building primitives (such as walls, curved walls, staircases, beams, and tanks) and glue them together at any angle with easy-to-use formwork software. Once you've drawn the building structure, formwork drawing is automatic. Handset Designer can draw formwork for virtually any structure, and it is fully integrated with Avontus Quantify for detailed formwork estimates, inventory management and billing.

Product Warning

WARNING! This software is intended for use by qualified formwork designers and competent persons as defined by OSHA. Use by unqualified persons may result in DEATH, SERIOUS PERSONAL INJURY OR PROPERTY DAMAGE. Loading determined by this software is based on the load-carrying capacity of panels, fillers, ties, and other hardware. The total loads on individual components as well as the loading of the formwork assembly must be considered. Bracing and platform design is to be performed by a competent person before proceeding with the work.
