

The Global Options Dialog

Global Options

General Requests Billing Reports Names and Labels Products Shipments and Scaffolds Job Site Options Quantify Web Notifications

Enable/disable tracking of various items in Quantify

- Track serialized assets and components
- Track inventory ('New' equipment)
- Allow servicing of equipment
- Use staging areas to contain unused equipment

Google features

- Automatically geocode addresses when entering (required for Google Earth feature)

Google maps key (used by Quantify Web)

Visit <https://developers.google.com/maps/documentation/static-maps/> to obtain a key for your server.

Location-based security

i Location-based security allows you to assign users to specific locations. These users will only be allowed to perform their role at locations they are assigned to.

- Enable location-based security

i Changes to global options affect all users

OK Cancel

Use the *Global Options* dialog to enable/disable and configure features that affect all users. For example, you can enable/disable serialized product tracking, inventory tracking, equipment servicing, requests, notifications, the use of Additional Charges and many more features. You can also use the *Global Options* dialog to add custom fields to your Quantify interface and name them as you wish. For example, if you would like to track a specific freight company's shipments, you can add a custom field to track this information. (Refer to the *Adding a Custom Field to the New Direct Ship Dialog* in [About the Global Options Dialog Shipments and Scaffolds Tab](#).) You can set up custom fields in multiple areas in Quantify. Once you do, you can select and include them in pivot reports.

Note: You cannot modify which currency units are used as Quantify does not store the data on units or currency in the database. For more information, please see [Number formats, Currency and Units of Measure in Quantify](#).

This dialog is separated into multiple tabs, each with its own article.
