

Using the Showing Filter

Many of Quantify's tabs have a dropdown called the **Showing** filter. This dropdown enables you to select a filter that determines what information Quantify presents in the table below. The expanded **Showing** filter dropdown displays a check next to each selected criteria. When not expanded, it displays the word *Showing* and the selected filter(s).

To use the **Showing** filter:

Click the **Showing** dropdown and select the criteria by which you want Quantify to display the information in the table.

When you release the mouse button, Quantify filters the information in the table below based on the selected filter criteria.

You can also find the filter on the screens like the New Reservation screen. Here you can select to show Products or Consumables at a specific site or on the Shipment (or show all Products/Consumables).

New Reservation
